● **BI-CITY · LOS ANGELES + PUNTA ARENAS, CHILE** · always someone in town for in-person work · happy to come to your office

What I do: I sit down with you — **at your office, my place in LA, or over a call** — and ship a working AI tool on your real files inside one week. You own the code, the prompts, the model setup. **No subscription. No vendor lock. No surprise invoice.** Built by a founder who's shipped 5 live AI products, not outsourced to a junior.

THE THREE ENGAGEMENTS

DISCOVERY DAY

\$1,500

One full day on your real work. I show up (or hop on), open your actual files, and ship one working AI integration — chatbot on your docs, lead-routing agent, report-gen, email automation. You leave with running code. **7-day money-back guarantee.**

IMPLEMENTATION SPRINT ★ MOST BOOKED

\$5,000

One week of senior founder time to design & ship a custom AI tool — trained on your files, in your voice, integrated with your stack (Stripe, HubSpot, Slack, Postgres, anything). You own the code & the model setup. Flat fee.

FRACTIONAL CTO

\$5–10K/mo

10–20 hrs/week, ongoing. Senior engineering leadership for startups without a CTO yet — architecture decisions, hiring, AI integration, code review, vendor selection. Month-to-month.

PROOF · FIVE LIVE PRODUCTION SYSTEMS I BUILT

DerbyFish (derby.fish)

Live competitive-fishing platform. AI-verified catches via AWS Rekognition + Claude Vision, on-chain Fish Cards on Flow blockchain, real-time leaderboards, 8 services across mobile / web / blockchain / analytics.

Nucleus Brain (nucleusbrain.com)

Self-hostable AI enterprise platform. 7 autonomous agent pillars, Claude SDK + MCP transport, Neo4j knowledge graph. 2,216 commits. Runs 15+ tenant instances on production k3s.

Walleye Fest Tournament

Live tournament SaaS (Rust API + Next.js dashboards). Powering Walleye Fest 2026. End-to-end ownership: schema, API, admin, fan portal.

BEST-FIT CLIENTS

- **Solo & small law firms** (1–5 attorneys, estate / family / immigration / criminal / probate) — document automation, intake AI, billing automation.
- **Specialty engineering consultancies** (geotech, environmental, materials testing) — report-gen, proposal automation, lab data pipelines.
- **Small business owners** with repetitive document or intake work — real estate, medical billing, insurance, contracting.
- **Early-stage startups** needing senior eng leadership without the \$300K/yr cost of a full-time CTO.
- **Skip:** firms with in-house IT/eng team, anyone shopping for an off-the-shelf SaaS.

WHAT I BRING

- **5 production AI systems shipped** (DerbyFish, Nucleus Brain, Walleye, Happyswims, Interactive Patagonia) — not theoretical.
- **Full-stack** — schema design through deployment, not just "prompt engineering."
- **Founder-grade ownership** — I treat your project like my company.
- **Risk-reversed** — if Discovery Day doesn't deliver running value, refund in writing.

COMMON QUESTIONS

- "We don't use AI today."** Perfect — Discovery Day is built exactly for this. \$1,500 to find out what's worth keeping, money-back if not.
- "Is this just ChatGPT?"** No. I build private tools trained on *your* documents — can run on your machine, your cloud, or anywhere you want. You own everything.
- "How fast?"** Discovery: 1 day. Implementation Sprint: 5 business days, start to ship. Fractional CTO: rolling.
- "Confidentiality?"** NDA before any file is opened. Compliance-aware (ABA Op. 512 for law firms, HIPAA-aware for medical).
- "Where are you based?"** Bi-city — LA (Irvine HQ) and Punta Arenas, Chile. I split time between both, so there's always someone in town for in-person meetings. Fluent Spanish + Russian, US-hours always.
- "Send me a proposal."** Better — book Discovery Day. You'll have working code by sundown. **If it's not worth the \$1,500, refund.**
